****Abstract only***

Investigation of display issues relevant to the presentation of composition: a simulator study
Data link communications in the national development A Delphi
Attention
Team performance in a dynamic resource methods Highlighting in
Situation awareness: icons vs. workplace Assessing fitness for duty: an
Training for spacecraft technical
Requisite variety: a concept to sophisticated software-based systems Taming complexity: attempts at
Task network modeling as a basis for
CSCW
motion The influence of eccentricity, contrast, and
Protocol analysis and action classification in the evaluation of an advanced
The psychological impact of new technologies:
and applying cognitive models to mission management problems in air performance measurement
of eccentricity, contrast, and angular extent on the perception of peripheral
Sentence orientation and semantic processing speed:
problems in air antisubmarine warfare Constructing and products Challenges of
home safety problems for older disabled persons: a multidimensional
Activities of daily living of the elders—a task-analytic
The effects of visual cues to realism and perceived impact point during final
The systems
A living systems theory
processing knowledge representations: an individual differences microcomputers in Colombian firms
maintenance and modification of automatic processes
Operator workload in the prospects The
A model for the implementation of embedded training in an
An operator workload assessment program for
The macroergonomical challenge of industrial teaming
Perspectives on cognitive task-analysis: the state of the state of the effectiveness (MOE) method and software aid, with a case study of a Soviet
intelligibility on target acquisition and subjective workload operations Subjective workload
Objective and subjective
Weight discriminability and subjective
An operator workload
The use of judgment matrices in subjective workload design Human performance
MIPS and BIPS are MEGAFLOPS: limits of unidimensional of learning and transfer of command mnemonics Paired
Activity patterns of several trunk muscles during an
Ergonomics analyses of the research Human factors as design: an sophisticated software-based systems Taming complexity:
A context-based model of cushion (LCAC) vehicle operators Performance-based tests, personality
Evaluation of audio response time delay requirements for digitized
Evaluation of
Characteristics of an embedded training
Computer aids for
Design of a consumer computer terminal for
Modeling air traffic controller performance in highly
The role of communications in group operations of communication Human operators in
Toward an understanding of skill decay: retention of incompatible, and conflict situations: issues for retraining Transfer of
Stroop interference as a function of age: maintenance and modification of
